SENSAtional Ideas

for Adults with Developmental Disabilities

M. JANET THOMAS, Med, OTR/L ■ JAMIE M. HALL, PT, DPT ■ TOBY M. LONG, PhD, PT

SENSAtional Ideas are sensory stimulation activities that caregivers can do with clients. These activities will calm, soothe, relax, or energize the clients. Many clients will enjoy being stimulated through their senses. We all enjoy smelling pleasant scents, being gently massaged with lotion, hearing music, and other pleasant sounds. Our clients also enjoy these activities.

SENSAtional Ideas are grouped according to the primary sensory system involved (touch, movement, sight, smell, hearing). A caregiver may use one of the activities or combine ideas. For example, massage a person’s arm while playing gentle music.

Prior to starting any of these activities, the client’s team should discuss any precautions or contraindications. For example, older clients with fragile skin may not be able to tolerate being massaged or some clients may not like

certain types of music. Also, the team may have suggestions on which activities would be most appropriate.

SENSAtional Ideas are arranged in a checklist format to make documentation easy for the caregiver. Several activities can be done each day. The caregiver should check off the activities completed to make sure a variety of activities are done. This will prevent repeating the same ones over and over. Unless indicated each activity should be done for no more than five minutes.

When you first try an activity with a client watch his or her reaction. If the client doesn’t enjoy the activity he or she may make an unpleasant face or draw away or make an unpleasant sound. Stop it or modify the activity in some way if it seems like the client doesn’t like the activity. All these activities should be pleasant for the client, if not, don’t do it.

SMELL IDEAS

Odors can be very powerful. Some people do not like certain smells like perfumes or clothes detergent. Because smell involves inputs to the receptors located in the nose and mouth, sometimes smelling something can increase our appetites. If you use an activity with pleasant food smells like cinnamon you may want to have a treat with the same taste in it available for the client. Sometimes strong smells like dish detergent can make us feel queasy.
